

Hi there,

I hope you can help me.

I had LASIK / Wavefront laser surgery on both eyes in 2005, with a very well known clinic.

I have been suffering with halo's, starbursts, night vision problems, glare from indoor & outdoor light sources & contrast insensitivity ever since.

My visual quality has been reduced far below of what it used to be with my normal glasses.

It has depressed me over the years, but enough is enough, there must be solution.

My LASIK clinic were not very helpful, as they say my eyes are practically 20/20 (+0.25 in right eye), which is fine but they have reduced the overall quality of my vision, and they can do nothing for me.

In any case, I would never let them near my eyes again to perform another so called "Enhancement".

I also get dry eyes although this is not that bad, until I am near AC units or it is windy day etc.

Is it possible to eliminate these problems, especially glare, halo's, & contrast insensitivity, with any of your available treatments?

I have read of some success stories in reducing these problems using iZON lenses or RPG contact lenses & Synergeyes lenses.

Would you recommend a contact lens solution over iZON glasses for example?? (I really don't mind wearing glasses again!!)

If you believe you can help me, please contact me.

If you need any further information from me for a web diagnosis, please let me know.

I look forward to your response.

Kindest regards,

Mr DB.
